

Quick Fact Sheet (10-20/12-20 Sands)

For Residential/Commercial Synthetic Turf: Quality Silica Sand Infill *Mother Nature's Own.....the natural, environmentally-friendly solution*

- specifically graded sub-round/round sand product
- exceeds the performance, percolation and safety standards for synthetic turf infilling
- residential/commercial 10-20/12-20 sands won't pack and compress after installation
- spreads and installs easily and, due to its inert nature – won't support insect inhabitation
- coarser 10-20/12-20 sands mean fewer pounds required for proper infilling
- non-toxic: pre-washed, dried and sterilized – and provides an effective impact absorption rate
- coarser gradations mean little to no dust is created during regular on-turf activities – thereby alleviating concerns about silicosis transmission
- no cases of MERSA-staph infections have ever been attributed to the sand granules
- TTII's residential/commercial 10-20/12-20 infilling sands are cooler than some other alternate infill materials.
- Color: tan, light beige, white – depending upon material origin
- Natural product – no coating necessary!

Packaging:

TTII's residential/commercial 10-20/12-20 infilling sands are available in a wide variety of locations, North America-wide. Depending upon location, several packaging/shipping options are available:

- 50lb bags on pallets (56-72 bags per pallet, depending on origin)
- 88lb bags on pallets (42 bags per pallet – TTII Alberta location)
- 100lb bags on pallets (30-35 bags per pallet, depending on origin)
- 2000-4000lb super-sacks on pallets (depending on origin)
- Bulk end-dumps (depending on origin)
