### Standard / Regulation:

ASTM F3188-16, Standard Specification for Extractable Hazardous Metals in Synthetic Turf Infill Materials

### Requirements:

This specification relates to the amount of certain metals that have the potential to be extracted from synthetic turf infill materials if ingested. The time, temperature, and pH of the extraction fluid approximate the conditions the infill material would experience in the stomach during the digestive process. The levels of extractable metals are compared to maximum levels allowed in children's toys.

This specification applies to all materials (man-made or natural) that are intended for use as infill materials for synthetic turf sports surfaces.

### Results:

All results were found to be below the limit criteria referenced above.
