### MOTHER NATURE'S INFILL

Silica sand is recognized as one of the most inert substances on earth. It is one of the most widely used and valuable minerals in existence. Silica dioxide, the main constituent of quartz based silica represents approximately 80% of the earth's surface.

**Superior sands are:**

- Non-agglomerated (single grain)
- Round to sub angular
- Crush resistant (minimum of 6 Mohs hardness )
- Highly resistant to moisture absorption
- Consistent in quality
- Washed to ensure a clean, low dust product
- Regularly sieve tested to ensure sand is in specification

We've got the sand you need in 10-20, 12-20, 16-30, 20-40, 30-50, 30-60 gradations and available to ship in bulk, in bulk bags, in 50 lb bags or rail car.

With over 25 plants to draw from, there's a location close to you.

Ask us about specialty sands for volleyball, beach or lagoon, golf course, airport or filtration.
